

1

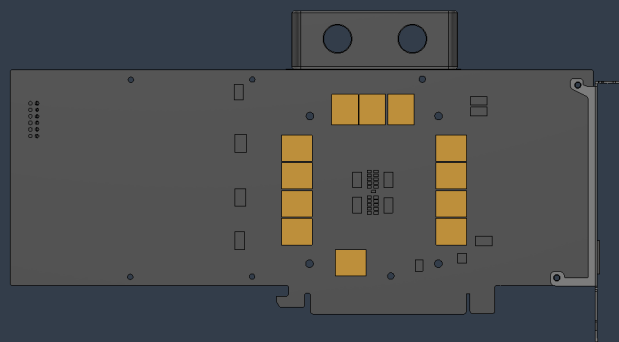

- Thermal pad 1mm
- Thermal pad 1mm
- Thermal Paste

2

Position the WATERBLOCK GPU

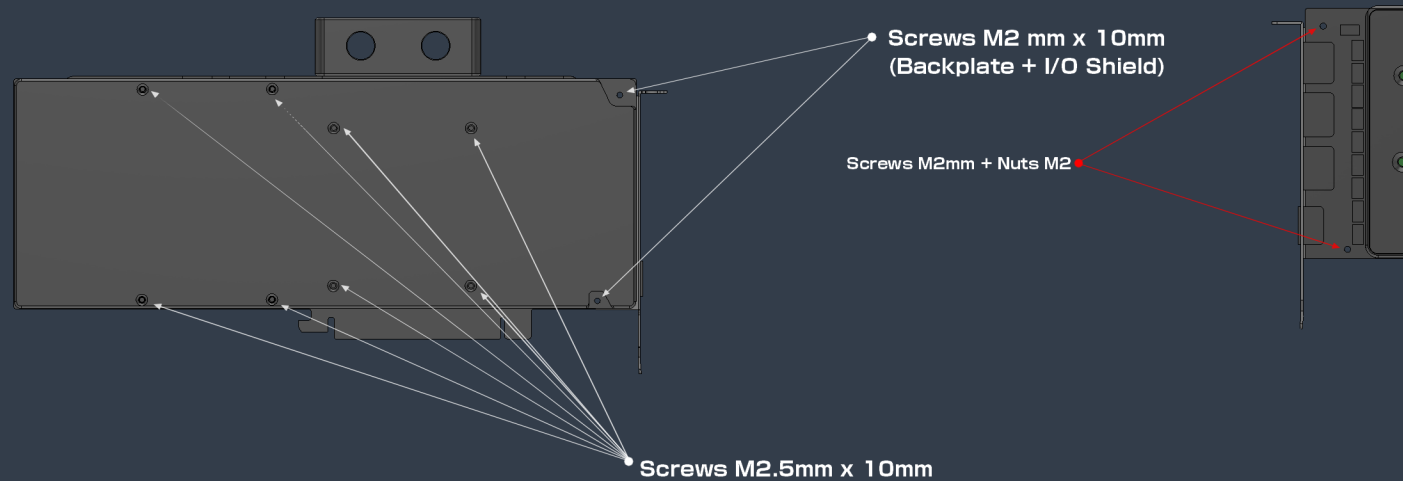

3

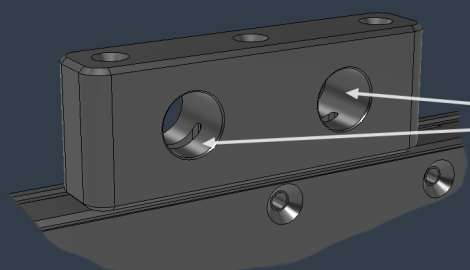

- Thermal pad 1mm

4

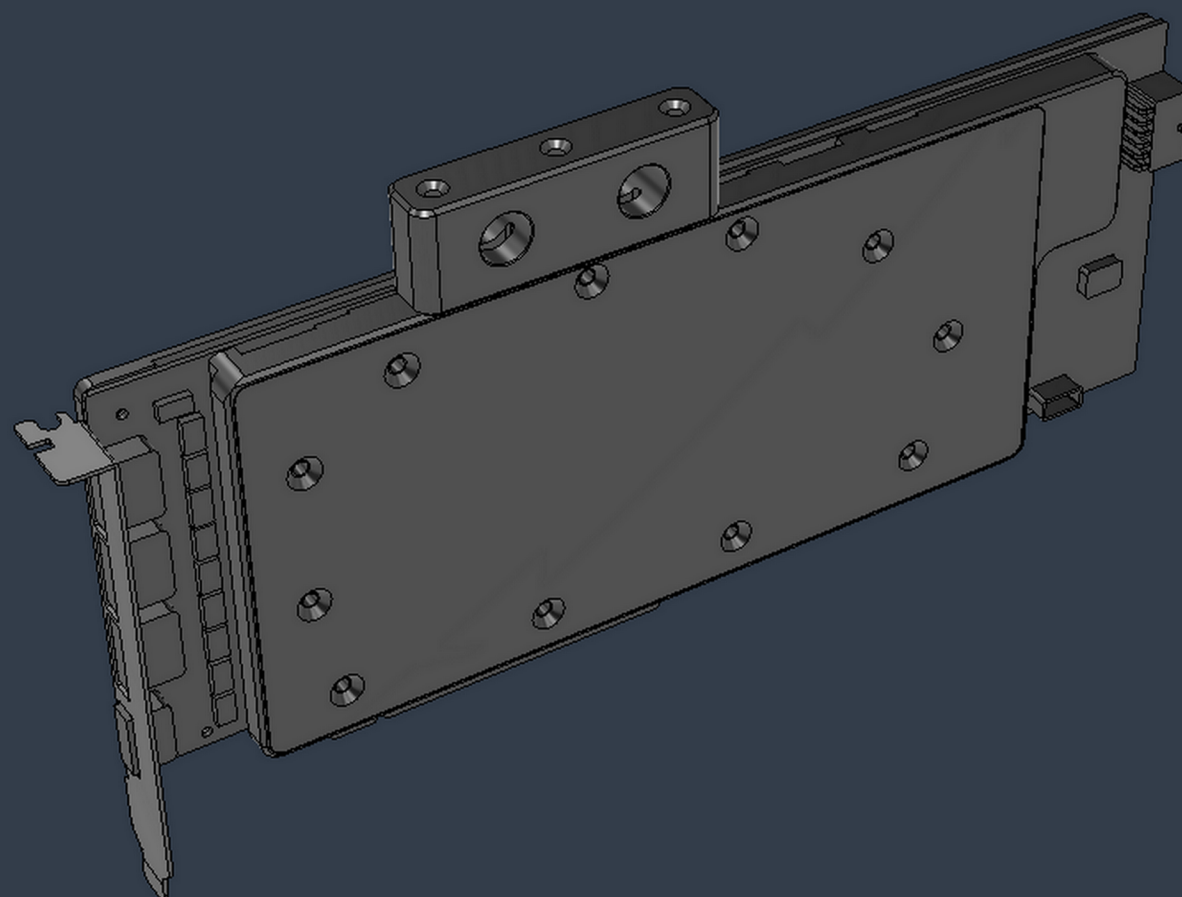

Position Backplate + Screws

5

The IN and OUT ports can be used in either direction.

WARNING!

When installing the screws and tightening the GPU waterblock onto the graphics card, regularly check that the PCB does not bend or warp excessively.

If this happens, it means that something is obstructing the installation, such as a thermal pad that is incorrectly positioned or placed in the wrong location. Slowly disassemble the waterblock and check the installation.

If there is no obvious issue on this side, please contact customer support.

NEVER FORCE IT!
